

DUAL DIGITAL ISOLATORS

FEATURES

- 1, 25, and 150-Mbps Signaling Rate Options
 - Low Channel-to-Channel Output Skew; 1 ns max
 - Low Pulse-Width Distortion (PWD); 1 ns max
 - Low Jitter Content; 1 ns Typ at 150 Mbps
- Typical 25-Year Life at Rated Voltage (see app. note [SLLA197](#) and [Figure 19](#))
- 4000-V_{peak} Isolation, 560 V peak V_{IORM}
 - UL 1577, IEC 60747-5-2 (VDE 0884, Rev 2), IEC 61010-1
 - 50 kV/μs Typical Transient Immunity

- Operates with 3.3-V or 5-V Supplies
- 4 kV ESD Protection
- High Electromagnetic Immunity
- –40°C to 125°C Operating Range

APPLICATIONS

- Industrial Fieldbus
 - Modbus
 - Profibus™
 - DeviceNet™ Data Buses
- Computer Peripheral Interface
- Servo Control Interface
- Data Acquisition

DESCRIPTION

The ISO7220 and ISO7221 are dual-channel digital isolators. To facilitate PCB layout, the channels are oriented in the same direction in the ISO7220 and in opposite directions in the ISO7221. These devices have a logic input and output buffer separated by TI's silicon-dioxide (SiO₂) isolation barrier, providing galvanic isolation of up to 4000 V. Used in conjunction with isolated power supplies, these devices block high voltage, isolate grounds, and prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry.

A binary input signal is conditioned, translated to a balanced signal, then differentiated by the capacitive isolation barrier. Across the isolation barrier, a differential comparator receives the logic transition information, then sets or resets a flip-flop and the output circuit accordingly. A periodic update pulse is sent across the barrier to ensure the proper dc level of the output. If this dc-refresh pulse is not received every 4 μs, the input is assumed to be unpowered or not being actively driven, and the failsafe circuit drives the output to a logic high state.

The small capacitance and resulting time constant provide very fast operation with signaling rates available from 0 Mbps (DC) to 150 Mbps.⁽¹⁾ The A- and C-option devices have TTL input thresholds and a noise filter at the input that prevents transient pulses from being passed to the output of the device. The M-option devices have CMOS V_{cc}/2 input thresholds and do not have the input noise-filter and the additional propagation delay.

These devices require two supply voltages of 3.3 V, 5 V, or any combination. All inputs are 5-V tolerant when supplied from a 3.3-V supply and all outputs are 4-mA CMOS.

These devices are characterized for operation over the ambient temperature range of –40°C to 125°C.

(1) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

DeviceNet is a trademark of Open DeviceNet Vendors Association.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

SINGLE-CHANNEL FUNCTION DIAGRAM

AVAILABLE OPTIONS

PRODUCT	SIGNALING RATE	PACKAGE	INPUT THRESHOLD	CHANNEL DIRECTION	MARKED AS	ORDERING NUMBER
ISO7220A	1 Mbps	SOIC-8	$\approx 1.5\text{ V}$ (TTL) (CMOS compatible)	Same direction	I7220A	ISO7220AD (rail) ISO7220ADR (reel)
ISO7220C	25 Mbps	SOIC-8	$\approx 1.5\text{ V}$ (TTL) (CMOS compatible)		I7220C	ISO7220CD (rail) ISO7220CDR (reel)
ISO7220M	150 Mbps	SOIC-8	$V_{CC}/2$ (CMOS)		I7220M	ISO7220MD (rail) ISO7220MDR (reel)
ISO7221A	1 Mbps	SOIC-8	$\approx 1.5\text{ V}$ (TTL) (CMOS compatible)		I7221A	ISO7221AD (rail) ISO7221ADR (reel)
ISO7221C	25 Mbps	SOIC-8	$\approx 1.5\text{ V}$ (TTL) (CMOS compatible)	Opposite directions	TI7221C	ISO7221CD (rail) ISO7221CDR (reel)
ISO7221M	150 Mbps	SOIC-8	$V_{CC}/2$ (CMOS)		I7221M	ISO7221MD (rail) ISO7221MDR (reel)

REGULATORY INFORMATION

VDE	CSA	UL
Certified according to IEC 60747-5-2	Approved under CSA Component Acceptance Notice	Recognized under 1577 Component Recognition Program ⁽¹⁾
File Number: 40014131	File Number: 1698195	File Number: E181974

(1) Production tested ≥ 3000 VRMS for 1 second in accordance with UL 1577.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

				VALUE	UNIT
V _{CC}	Supply voltage ⁽²⁾ , V _{CC1} , V _{CC2}			–0.5 to 6	V
V _I	Voltage at IN, OUT			–0.5 to 6	V
I _O	Output current			±15	mA
ESD	Electrostatic discharge	Human Body Model	Electrostatic discharge JEDEC Standard 22, Test Method A114-C.01	±4	kV
		Field-Induced-Charged Device Model	JEDEC Standard 22, Test Method C101	±1	
		Machine Model	ANSI/ESDS5.2-1996	±200	V
T _J	Maximum junction temperature			170	°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to network ground terminal and are peak voltage values.

RECOMMENDED OPERATING CONDITIONS

			MIN	TYP	MAX	UNIT	
V _{CC}	Supply voltage, V _{CC1} , V _{CC2}		4.5		5.5	V	
			3		3.6		
I _{OH}	High-level output current		4			mA	
I _{OL}	Low-level output current		−4			mA	
t _{ui}	Input pulse width		ISO722xA	1		μs	
			ISO722xC	40		ns	
			ISO722xM	6.67	5		
1/t _{ui}	Signaling rate		ISO722xA	0	250	1000	kbps
			ISO722xC	0	30	25	Mbps
			ISO722xM	0	200 ⁽¹⁾	150	
V _{IH}	High-level input voltage		ISO722xA, ISO722xC	2	V _{CC}		V
V _{IL}	Low-level input voltage			0	0.8		V
V _{IH}	High-level input voltage		ISO722xM	0.7 V _{CC}	V _{CC}		V
V _{IL}	Low-level input voltage			0	0.3 V _{CC}		V
T _J	Junction temperature		−40			150	°C
H	External magnetic field-strength immunity per IEC 61000-4-8 & IEC 61000-4-9 certification					1000	A/m

- (1) Typical signalling rate under ideal conditions at 25°C.

ELECTRICAL CHARACTERISTICS

V_{CC1} and V_{CC2} at 5-V operation, over recommended operating conditions (unless otherwise noted)

PARAMETER			TEST CONDITIONS	MIN	TYP	MAX	UNIT
SUPPLY CURRENT							
I _{CC1}	ISO7220A, ISO7220C, ISO7220M	Quiescent	V _I = V _{CC} or 0 V, no load		1	2	mA

(2) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.

(3) $t_{sk(o)}$ is the skew between specified outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical specified loads.

PARAMETER MEASUREMENT INFORMATION

- A. The input pulse is supplied by a generator having the following characteristics: $PRR \leq 50$ kHz, 50% duty cycle, $t_r \leq 3$ ns, $t_f \leq 3$ ns, $Z_O = 50\Omega$.
- B. $C_L = 15$ pF and includes instrumentation and fixture capacitance within $\pm 20\%$.

Figure 1. Switching Characteristic Test Circuit and Voltage Waveforms

- A. $C_L = 15$ pF and includes instrumentation and fixture capacitance within $\pm 20\%$.

Figure 2. Failsafe Delay Time Test Circuit and Voltage Waveforms

- A. $C_L = 15$ pF and includes instrumentation and fixture capacitance within $\pm 20\%$.

Figure 3. Common-Mode Transient Immunity Test Circuit

NOTE: PRBS bit pattern run length is $2^{16} - 1$. Transition time is 800 ps.

Figure 4. Peak-to-Peak Eye-Pattern Jitter Test Circuit and Voltage Waveform

DEVICE INFORMATION

IEC PACKAGE CHARACTERISTICS

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
L(I01)	Minimum air gap (Clearance)	Shortest terminal-to-terminal distance through air	SOIC-8	4.8			mm
L(I02)	Minimum external tracking (Creepage)	Shortest terminal-to-terminal distance across the package surface		4.3			mm
CTI	Tracking resistance (Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1		≥175			V
	Minimum Internal Gap (Internal Clearance)	Distance through the insulation		0.008			mm
R _{IO}	Isolation resistance	Input to output, V _{IO} = 500 V, all pins on each side of the barrier tied together creating a two-terminal device, T _A < 100°C		>10 ¹²			Ω
		Input to output, V _{IO} = 500 V, 100°C ≤ T _A ≤ max		>10 ¹¹			Ω
C _{IO}	Barrier capacitance Input to output	V _I = 0.4 sin (4E6πt)		1			pF
C _I	Input capacitance to ground	V _I = 0.4 sin (4E6πt)		1			pF

NOTE: Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the [Isolation Glossary](#). Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

IEC 60664-1 RATINGS TABLE

PARAMETER	TEST CONDITIONS	SPECIFICATION
Basic isolation group	Material group	IIIa
Installation classification	Rated mains voltage ≤150 VRMS	I-IV
	Rated mains voltage ≤300 VRMS	I-III
	Rated mains voltage ≤400 VRMS	I-II

IEC 60747-5-2 INSULATION CHARACTERISTICS⁽¹⁾

PARAMETER	TEST CONDITIONS	SPECIFICATION	UNIT
V _{IORM}	Maximum working insulation voltage	560	V
V _{PR}	Input to output test voltage	Method b1, V _{PR} = V _{IORM} × 1.875, 100% Production test with t = 1 s, Partial discharge <5 pC	
V _{IOTM}	Transient overvoltage	t = 60 s	
R _S	Insulation resistance	V _{IO} = 500 V at T _S	Ω
	Pollution degree	2	

(1) Climatic Classification 40/125/21

DEVICE I/O SCHEMATICS

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I _S	Safety input, output, or supply current	SOIC-8	$\theta_{JA} = 212^{\circ}\text{C/W}$, $V_I = 5.5\text{ V}$, $T_J = 170^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$		124	mA
		SOIC-8	$\theta_{JA} = 212^{\circ}\text{C/W}$, $V_I = 3.6\text{ V}$, $T_J = 170^{\circ}\text{C}$, $T_A = 25^{\circ}\text{C}$		190	
T _S	Maximum case temperature	SOIC-8			150	°C

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the Thermal Characteristics table is that of a device installed in the JESD51-3, Low Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages and is conservative. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

SOIC-8 PACKAGE THERMAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
θ_{JA}	Junction-to-air	Low-K Thermal Resistance ⁽¹⁾		212		°C/W
		High-K Thermal Resistance		122		
θ_{JB}	Junction-to-Board Thermal Resistance			37		
θ_{JC}	Junction-to-Case Thermal Resistance			69.1		
P_D	Device Power Dissipation	ISO722xM $V_{CC1} = V_{CC2} = 5.5\text{ V}$, $T_J = 150^\circ\text{C}$, $C_L = 15\text{ pF}$, Input a 150 Mbps 50% duty cycle square wave			390	mW

(1) Tested in accordance with the Low-K or High-K thermal metric definitions of EIA/JESD51-3 for leaded surface mount packages.

ISOLATION GLOSSARY

Creepage Distance — The shortest path between two conductive input to output leads measured along the surface of the insulation. The shortest distance path is found around the end of the package body.

Clearance — The shortest distance between two conductive input to output leads measured through air (line of sight).

Input-to Output Barrier Capacitance -- The total capacitance between all input terminals connected together, and all output terminals connected together.

Input-to Output Barrier Resistance -- The total resistance between all input terminals connected together, and all output terminals connected together.

Primary Circuit -- An internal circuit directly connected to an external supply mains or other equivalent source which supplies the primary circuit electric power.

Secondary Circuit -- A circuit with no direct connection to primary power, and derives its power from a separate isolated source.

Comparative Tracking Index (CTI) -- CTI is an index used for electrical insulating materials which is defined as the numerical value of the voltage which causes failure by tracking during standard testing. Tracking is the process that produces a partially conducting path of localized deterioration on or through the surface of an insulating material as a result of the action of electric discharges on or close to an insulation surface -- the higher CTI value of the insulating material, the smaller the minimum creepage distance.

Generally, insulation breakdown occurs either through the material, over its surface, or both. Surface failure may arise from flashover or from the progressive degradation of the insulation surface by small localized sparks. Such sparks are the result of the breaking of a surface film of conducting contaminant on the insulation. The resulting break in the leakage current produces an overvoltage at the site of the discontinuity, and an electric spark is generated. These sparks often cause carbonization on insulation material and lead to a carbon track between points of different potential. This process is known as *tracking*.

ISOLATION GLOSSARY (continued)

Insulation:

Operational insulation -- Insulation needed for the correct operation of the equipment.

Basic insulation -- Insulation to provide basic protection against electric shock.

Supplementary insulation -- Independent insulation applied in addition to basic insulation in order to ensure protection against electric shock in the event of a failure of the basic insulation.

Double insulation -- Insulation comprising both basic and supplementary insulation.

Reinforced insulation -- A single insulation system which provides a degree of protection against electric shock equivalent to double insulation.

Pollution Degree:

Pollution Degree 1 -- No pollution, or only dry, nonconductive pollution occurs. The pollution has no influence.

Pollution Degree 2 -- Normally, only nonconductive pollution occurs. However, a temporary conductivity caused by condensation must be expected.

Pollution Degree 3 -- Conductive pollution occurs or dry nonconductive pollution occurs which becomes conductive due to condensation which is to be expected.

Pollution Degree 4 -- Continuous conductivity occurs due to conductive dust, rain, or other wet conditions.

Installation Category:

Overvoltage Category -- This section is directed at insulation co-ordination by identifying the transient overvoltages which may occur, and by assigning 4 different levels as indicated in IEC 60664.

I: Signal Level -- Special equipment or parts of equipment.

II: Local Level -- Portable equipment etc.

III: Distribution Level -- Fixed installation

IV: Primary Supply Level -- Overhead lines, cable systems

Each category should be subject to smaller transients than the category above.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
