## Radial-leaded Devices

Raychem Circuit Protection has pioneered PPTC technology for over 25 years. Our radial-leaded products represent the widest range of product capabilities.

- RGEF series for hold currents up to 14A
- RHEF series for flatter thermal derating and operating temperatures up to 125°C
- RUEF series for balance of voltage rating (30V) and hold current (up to 9A)
- RUSBF series for fast time-to-trip and low-resistance computer applications
- RTEF series specifically designed for IEEE-1394 applications
- RXEF series for low hold currents (down to 50mA) and high voltage rating (up to 72V)
- LVR/LVRL series for line voltage applications up to a continuous operating voltage of 265V<sub>AC</sub>/135V<sub>AC</sub>
- BBRF series for cable telephone applications
- Now offering Pb-free versions of all products. For Pb-free versions of R-line products simply add an "F" to the end of the series description.

Whether for design or volume application, Raychem Circuit Protection's radial-leaded products represent the most comprehensive and complete set of PPTC products available in the industry today.

### Benefits

- Many product choices give engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assists in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

### Features

- Broadest range of radial-leaded resettable devices available in the industry
- Current ratings from 50mA to 15A
- Voltage ratings from 6V (computer and electronic applications) to 265V<sub>AC</sub> line voltage applications
- Agency recognition : UL, CSA, TÜV
- Fast time-to-trip
- Low resistance

## Protection Application Selection Guide for Radial-leaded Devices

The guide below lists PolySwitch devices that are typically used in these applications.

Specifications for the suggested device part numbers can be found in this section.

Once a part number has been selected, the user should evaluate and test each product for its intended application.

Protection Application	PolySwitch Resettable Devices—Key Selection Criteria		
	Small Size	Flatter Derating	Lower Current Higher Voltage
Electromagnetic loads	RGEF (<16V), RUEF (<30V)	RHEF (<30V)	RXEF (<72V)
Halogen lighting	RGEF (<16V), RUEF (<30V)	RHEF (<30V)	RXEF (<72V)
Lighting ballast	RXEF (<72V), BBRF (<99V <sub>AC</sub> )		LVR (<265V <sub>AC</sub> )
Loudspeakers	RXEF (<72V)		RXEF (<72V)

Notes:

- I<sub>H</sub> : Hold current: maximum current device will pass without interruption in 20°C still air.
- I<sub>T</sub> : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.
- R<sub>min</sub> : Minimum resistance of device as supplied at 20°C unless otherwise specified.
- R<sub>max</sub> : Maximum resistance of device as supplied at 20°C unless otherwise specified.
- V<sub>max</sub> : Maximum continuous voltage device can withstand without damage at rated current.
- V<sub>max</sub> Interrupt : Under specified conditions this is the highest voltage that can be applied to the device at the maximum current.
- I<sub>max</sub> : Maximum fault current device can withstand without damage at rated voltage.
- P<sub>D</sub> : Power dissipated from device when in the tripped state in 20°C still air.
- R<sub>1max</sub> : Maximum resistance of device when measured one hour post reflow (surface-mount device) or one hour post trip (radial-leaded device) at 20°C unless otherwise specified.

## Table R5 - Physical Characteristics and Environmental Specifications for Radial-leaded Devices

### LVR/LVRL Physical Characteristics

Lead material	LVR005-016: Tin-plated copper, 0.205mm <sup>2</sup> (24AWG), ø0.51mm (0.020in.) LVR025-040: Tin-plated copper, 0.32mm <sup>2</sup> (22AWG), ø0.64mm (0.025in.) LVR055: Tin-plated copper, 0.52mm <sup>2</sup> (20AWG), ø0.81mm (0.032in.) LVRL: Tin-plated copper, 0.52mm <sup>2</sup> (20AWG), ø0.81mm (0.032in.)
Soldering characteristics	Solderability pre ANSI/J-STD-002 Category 3
Solder heat withstand	per IEC-STD 68-2-20, Test Tb, Method 1a, condition b, can withstand 10 seconds at 260°C ±5°C

Devices are not designed to be placed through a reflow process.

### LVR/LVRL Environmental Specifications

Test	Conditions	Resistance Change
Passive aging	70°C, 1000 hours	±5%
	85°C, 1000 hours	±5%
Humidity aging	85°C, 85%RH, 1000 hours	±5%
Thermal Shock	85°C, -40°C (10 times)	±5%
Solvent resistance	MIL-STD-202, Method 215F	No change

### BBRF Physical Characteristics

Lead material	Tin-plated copper, 0.52mm <sup>2</sup> (20AWG), ø0.81mm (0.032in.)
Soldering characteristics	Solderability pre ANSI/J-STD-002 Category 3
Solder heat withstand	per IEC-STD 68-2-20, Test Tb, Method 1a, condition b, can withstand 10 seconds at 260°C ±5°C
Insulating material	Cured, flame-retardant epoxy polymer; meets UL 94V-0

Devices are not designed to be placed through a reflow process.

### BBRF Environmental Specifications

Test	Conditions	Resistance Change
Passive aging	70°C, 1000 hours	±5%

**⚠ WARNING: Application Limitations for the LVR Product Line**

- 1) Users should independently evaluate the suitability of and test each product selected for their own application.
- 2) This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded in a fault condition. Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- 3) A PTC device is not a fuse - it is a nonlinear thermistor that limits current. Because under a fault condition all PTC devices go into a high resistance state but not open circuit, hazardous voltage may be present at PTC locations.
- 4) The devices are intended for protection against occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- 5) In most applications, power must be removed and the fault condition cleared in order to reset a PTC device. However, under certain unusual conditions, a PTC device may automatically reset. Accordingly, PTC devices should not be used in an application where an automatic reset could create a safety hazard, such as garbage disposals and blenders.
- 6) It is the responsibility of the user to determine the need for back up or fail safe protection to prevent damage that may occur in the event of abnormal function or failure of the PTC device.
- 7) Operation in circuits with a large inductance can generate a circuit voltage ( $Ldi/dt$ ) above the rated voltage of a PTC device.
- 8) Devices are not recommended for reflow soldering.
- 9) Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, or mechanical procedures for electronic components.
- 10) PTC devices are not recommended to be installed in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- 11) Contamination of the PTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.

**WARNING:**

- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- The devices are intended for protection against occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicon based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- Operation in circuit with a large inductance can generate a circuit voltage ( $L \frac{di}{dt}$ ) above the rated voltage of the PolySwitch resettable device.
