

XH-M173 Microphone Amplifier Module PT2399 AC 12V Dual Power Supply Karaoke Reverberation Board

Description:

This type of karaoke board adopts PT2399 chip, which plays the role of echo sound effects. PT2399 is a typical karaoke echo processing integrated circuit. It is widely used in CD, VCD, DVD, TV and karaoke machines.

The prime amplifier of the microphone used two classic dual-transport NE5532. It is used for audio signal amplification and effective processing. The board is with two-channel microphone input and audio hybrid technology.

You can enjoy the fun of karaoke.

Parameters:

No.	Parameter	Value
1	Model	XH-M173
2	Name	karaoke reverberation board
3	Output load	Post - level amplifier
4	Chip selection	dual power AC12V
5	Machine size	100*57*17mm
6	Net weigh	62g

Using attention:

1>. Power supply is with AC double 12V transformers.

2>. The audio output part of this board needs to be connected to the amplifier plate, not the stereo.

3>. As for the scream, now all of the k-song products, when the microphone is near the speakers, they will scream. So don't hold the microphone to the speakers.
