QUADRUPLE 2-LINE-TO-1-LINE DATA SELECTORS/MUXES

BULLETIN NO. DL-S 7711734, OCTOBER 1976—REVISED AUGUST 1977

- Three-State Outputs Interface Directly with System Bus
- 'LS257A and 'LS258A Offer Three Times the Sink-Current Capability of the Original 'LS257 and 'LS258
- Same Pin Assignments as SN54LS157, SN74LS157, SN54S157, SN74S157, and SN54LS158, SN74LS158, SN54S158, SN74S158
- Provides Bus Interface from Multiple Sources in High-Performance Systems

	AVERAGE PROPAGATION DELAY FROM DATA INPUT	TYPICAL POWER DISSIPATION [◊]
'LS257A	12 ns	60 mW
'LS258A	12 ns	60 mW
'S257	4.8 ns	320 mW
'S258	4 ns	280 mW

[◊]Off state (worst case)

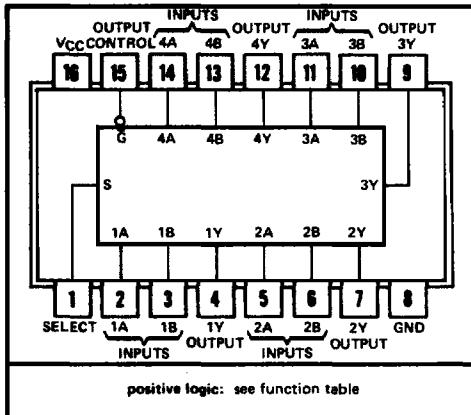

description

These Schottky-clamped high-performance multiplexers feature three-state outputs that can interface directly with and drive data lines of bus-organized systems. With all but one of the common outputs disabled (at a high-impedance state) the low impedance of the single enabled output will drive the bus line to a high or low logic level. To minimize the possibility that two outputs will attempt to take a common bus to opposite logic levels, the output-enable circuitry is designed such that the output disable times are shorter than the output enable times.

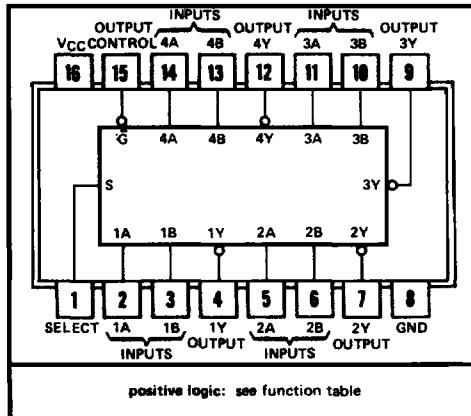

This three-state output feature means that n-bit (parallelized) data selectors with up to 256 sources can be implemented for data buses. It also permits the use of standard TTL registers for data retention throughout the system.

Series 54LS and 54S are characterized for operation over the full military temperature range of -55°C to 125°C ; Series 74LS and 74S are characterized for operation from 0°C to 70°C .
