

**PERIPHERAL DRIVERS FOR
HIGH-VOLTAGE, HIGH-CURRENT DRIVER APPLICATIONS**

performance

- Characterized for Use to 300 mA
- High-Voltage Outputs
- No Output Latch-Up at 30 V (After Conducting 300 mA)
- Medium-Speed Switching

ease-of-design

- Circuit Flexibility for Varied Applications and Choice of Logic Function
- TTL- or DTL-Compatible Diode-Clamped Inputs
- Standard Supply Voltages
- Available in Plastic and Ceramic Packages

description

Series 55460/75460 dual peripheral drivers are functionally interchangeable with Series 55450B/75450B and Series 55460/75460 peripheral drivers, but are designed for use in systems that require higher breakdown voltages than either of those series can provide at the expense of slightly slower switching speeds. Typical applications include logic buffers, power drivers, relay drivers, lamp drivers, MOS drivers, line drivers, and memory drivers. Series 55460 drivers are characterized for operation over the full military temperature range of -55°C to 125°C ; Series 75460 drivers are characterized for operation from 0°C to 70°C .

The SN55460 and SN75460 are unique general-purpose devices each featuring two standard Series 54/74 TTL gates and two uncommitted, high-current, high-voltage, n-p-n transistors. These devices offer the system designer the flexibility of tailoring the circuit to the application.

The SN55461/SN75461, SN55462/SN75462, SN55463/SN75463, and SN55464/SN75464 are dual peripheral AND, NAND, OR, and NOR drivers, respectively, (assuming positive logic) with the output of the gates internally connected to the bases of the n-p-n output transistors.

- NOTES:
1. Voltage values are with respect to network ground terminal unless otherwise specified.
 2. This is the voltage between two emitters of a multiple emitter transistor.
 3. This value applies when the base-emitter resistance (R_{BE}) is equal to or less than 500 Ω .
 4. This value applies between 0 and 10 mA collector current when the base-emitter diode is open-circuited.
 5. Both halves of these dual circuits may conduct rated current simultaneously; however, power dissipation averaged over a short time interval must fall within the continuous dissipation rating.
 6. For operation above 25°C free-air temperature, refer to Dissipation Derating Curves in the Thermal Information Section, which starts on page 11. In the J and JG packages, SN55460 through SN55464 chips are alloy-mounted; SN75460 through SN75464 chips are glass-mounted.

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. The pulse generator has the following characteristics: PRR = 1 MHz, $Z_{out} \approx 50 \Omega$.
 B. C_L include probe and jig capacitance.
 C. All diodes are 1N3064.

VOLTAGE WAVEFORMS

- NOTES: A. The pulse generator has the following characteristics: PRR = 12.5 kHz, $Z_{out} = 50 \Omega$.
 B. When testing SN55460 or SN75460, connect output Y to transistor base with a 500- Ω resistor from there to ground, and ground the substrate terminal.
 C. C_L includes probe and jig capacitance.
