SILICON MONOLITHIC

TC40H375P/F

TC40H375 4-BIT BISTABLE LATCH

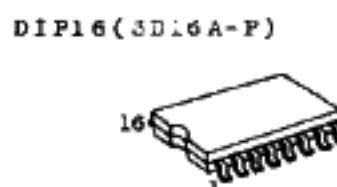

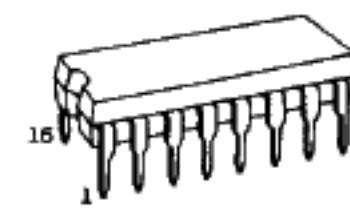

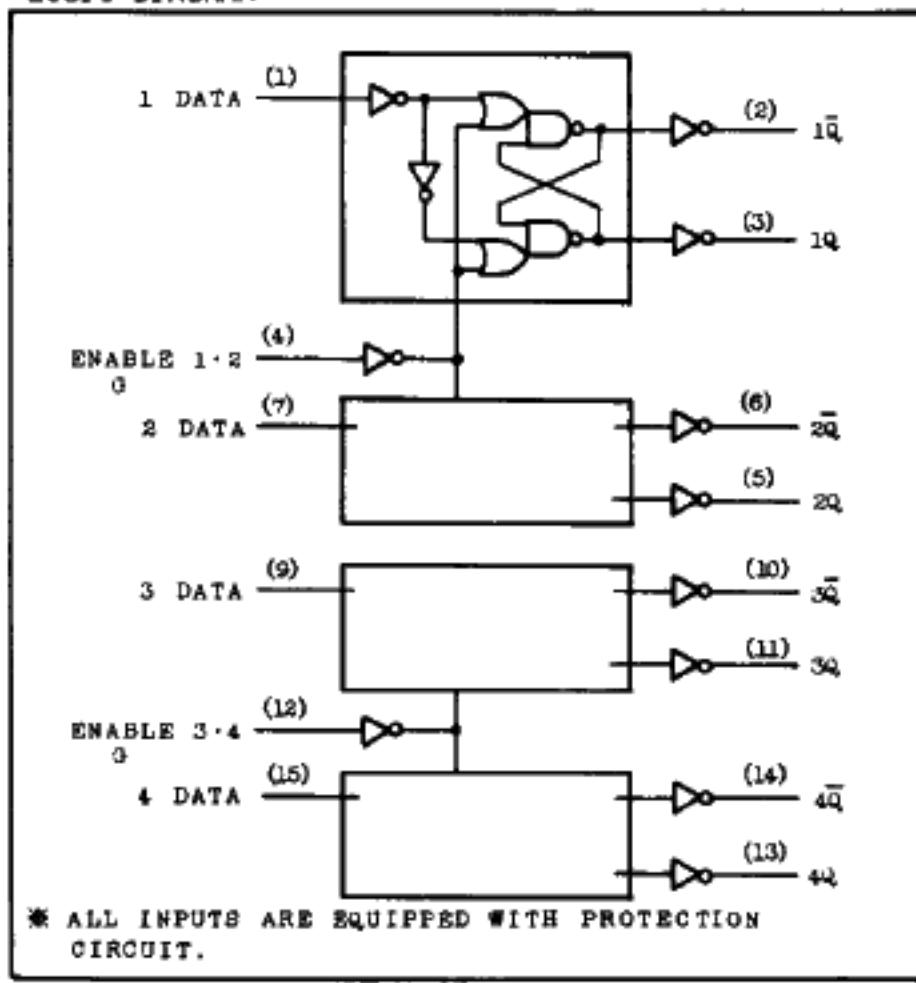

The TC40H375 is a 4-bit latch having ENABLE input terminal common in two circuits.

When ENABLE input is at "H" level, DATA input is transmitted to output as it is. If ENABLE input is transferred from "H" level to "L" level, latch holds input DATA immediately before falling. When ENABLE input is at "L" level, output does not change even if input DATA changes.
